California Proposition 65

⚠️ WARNING ⚠️
Engine exhaust, some of its constituents, certain vehicle components and fluids, contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

IMPORTANT

The engine in this machine is not equipped by the manufacturer with a standard spark arrester. It is a violation of California Public Resource Code Section 4442 to use or operate this engine on or near any forest-covered, brush-covered land, or grass-covered land unless the exhaust system is equipped with a working spark arrester meeting state laws. Other states or federal areas may have similar laws.
GENERAL SYMBOLS

The instruments and operation elements have been marked with a series of symbols in order to simplify the operation of your excavator. These symbols are listed below with the respective descriptions.

Safety alert Symbol
Warning lamp "Fuel level too low"
System lamp
Warning lamp "Engine Oil pressure"
Warning lamp "Battery charge"
Warning lamp "Auto Idle (Al) Lamp"
Indicator lamp "Glow"
Working light switch
Horn
Wiper/Washer switch
Diesel
Hydraulic fluid
Gear oil
Grease
Fast
Slow
Excavator - Overhead movement toward the front
Excavator - Overhead movement toward the rear
Boom raise
Boom lower
Arm out
Arm in
Bucket crowd
Bucket dump
Boom swing (left)
Boom swing (right)
Dozer raise
Dozer lower
Operation direction of control lever
Operation direction of control lever
Read operator's manual
Engine stop control lamp
Lock
Unlock
Reducing / Increasing track width
FOREWORD

You are now the proud owner of a KUBOTA Excavator. This excavator is a product of KUBOTA quality engineering and manufacturing. It is made of fine materials and under a rigid quality control system. It will give you long, satisfactory service. To obtain the best use of your excavator, please read this manual carefully. It will help you become familiar with the operation of the excavator and contains many helpful hints about excavator maintenance. It is KUBOTA’s policy to utilize as quickly as possible every advance in our research. The immediate use of new techniques in the manufacture of products may cause some small parts of this manual to be outdated. KUBOTA distributors and dealers will have the most up-to-date information. Please do not hesitate to consult with them.

SAFETY FIRST

This symbol, the industry’s "Safety Alert Symbol", is used throughout this manual and on labels on the machine itself to warn of the possibility of personal injury. Read these instructions carefully. It is essential that you read the instructions and safety regulations before you attempt to assemble or use this unit.

DANGER : Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

WARNING : Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION : Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury.

IMPORTANT : Indicates that equipment or property damage could result if instructions are not followed.

NOTE : Gives helpful information.

The best insurance against accidents is to abide by the safety regulations.  
**Read and understand this manual carefully before operating the excavator.**  
Every user, however experienced, should carefully read and understand this manual and those of the attachments and accessories before taking the excavator into operation. The owner is obliged to inform the operators of these instructions in detail.  
Keep this manual in the pocket under the seat.

---

**1. BEFORE OPERATION**

1. Make yourself acquainted with the excavator and be aware of its limits. Read the operating instructions carefully before starting the excavator.  
2. Obey the danger, warning and caution labels on the machine.  
3. For your safety, a ROPS/OPG (Top Guard Level I) with a seat belt is installed by KUBOTA.  
   - **ROPS**: Roll-Over Protective Structure  
   - **OPG (Top Guard Level I)**: Operator Protective Guards of Top Guard Level I  
   - OPG (Top Guard Level I) in accordance with ISO10262 is equivalent in definition to FOPS (Falling Object Protective Structure).  
   - Always use the seat belt when the machine is equipped with a ROPS/OPG (Top Guard Level I).  
   - Do not modify structural members of ROPS by welding, drilling, bending, grinding or cutting, as this may weaken the structure. If any component is damaged, replace it. Do not attempt repairs. If ROPS is loosened or removed for any reason, make sure all parts are reinstalled correctly. Tighten mounting bolts to proper torque.  
4. The seat belt must be inspected regularly and replaced if damaged.  
5. Always sit in the operator’s seat when starting engine or operating levers or controls.  
6. Study control lever pattern A and pattern B. Then choose the one which is most familiar. Familiarize yourself with the pattern selected by operation slowly at low engine speed.  
   - Engage the lever lock to prevent accidental pattern change.
7. Do not operate the excavator while under the influence of alcohol, medication, controlled substances or while fatigued.

8. Check the surroundings carefully before using the excavator or when attachments are being attached.
   - Pay attention to the overhead clearance with electric wires.
   - Check for pipes and buried cables before digging.
   - Check for hidden holes, hindrances, soft underground, and overhangs.

9. Do not allow other persons to use the machine before having informed him on the exact operation and work instructions, and be assured that the operator's manual has been read and completely understood.

10. Do not wear baggy, torn or oversized clothing when working with the excavator. Clothing can get caught in rotating parts or control elements which can cause accidents or injuries. Wear adequate safety clothing, e.g. safety helmet, safety shoes, eye protection, ear protection, working gloves, etc., as necessary and as prescribed by law or statutes.

11. Do not allow passengers to ride on any part of the excavator at anytime. The operator must remain in the excavator seat during operation.

12. Check mechanical parts for correct adjustments and wear.

13. Keep your excavator clean. Heavy soiling, grease, dust and grass can cause fires, accidents or injuries.

14. Use only KUBOTA authorized attachments.

15. Before starting the excavator, be absolutely sure that the excavator has been filled with fuel, lubricated, greased and undergone all necessary maintenance.

16. Do not modify the excavator, otherwise it could lead to unforeseen safety problems.

17. Do not hammer anything that is above the operator's seat level. Objects may fall into the operator station of mini-excavator from front.

18. Make sure attachments, particularly those utilizing quick attach systems, are securely mounted.
2. STARTING OF THE EXCAVATOR

1. Get into and out of the machine safely. Always face the machine and use 3 point contact with machine. Always use handrails and available steps and keep yourself well balanced. Do not hold any of the control levers and switches. Do not jump on or off the machine, whether stationary or in motion.

2. Start and control the excavator only from the operator's seat. The driver should not lean out of his seat when the engine is running.

3. Before starting the engine, make sure that lock levers are in position "Lock" and all control levers and pedals are in their neutral positions and the seat belt is fastened correctly and the area around the excavator is clear. Before starting the engine, make sure that the control levers, travel lever, pedals and other control elements are not stuck and can be moved smoothly. If stuck, for example, a lever may fail to return, possibly putting you in danger. If anything wrong is found, immediately pinpoint the cause and correct it.

4. Make sure that the dozer blade is in front of you. (The dozer must be raised.) If the levers are activated with the dozer blade at the rear, the tracks will move in the opposite direction of the drive levers.

5. Do not operate or idle engine in a non-ventilated area. Carbon monoxide gas is colorless, odorless, and deadly.

6. Keep all safety equipment and covers in place. Replace damaged or missing safety devices.

7. Do not operate the excavator while putting out the hands and the body from the windows. Do not touch the control levers and the pedals from outside the cab during the engine running.

8. Precautions against tipping over. Keep away from steep slopes and embankments. Do not swing the bucket downhill. Lower the dozer during digging. Keep the bucket as low as possible while driving uphill. Turn slowly on slopes (at reduced speed). Do not place the excavator near the edges of trenches and banks, as the earth can give away due to the weight of the excavator.

   ALLOWABLE CLIMBING ANGLE : 36 % (20 deg.)
   ALLOWABLE ANGLE IN CASE OF CROSSING SIDEWAY : 27 % (15 deg.)

9. Watch out at all times for the area to which the excavator is being moved. Pay attention to any hindrances.

10. Keep enough distance from trench and bank edges.
◆ Safety for children
Tragedy can occur if the operator is not alert to the presence of children. Children generally are attracted to machines and the work they do.

1. Never assume that children will remain where you last saw them.
2. Keep children out of the work area and under the watchful eye of another responsible adult.
3. Be alert and shut your machine down if children enter the work area.
4. Never carry children on your machine. There is not a safe place for them to ride. They may fall off and be run over or interfere with your control of the machine.
5. Never allow children to operate the machine even under adult supervision.
6. Never allow children to play on the machine or on the attachments.
7. Use extra caution when backing up. Look behind and down to make sure the area clear before moving.
8. When parking your machine, if at all possible, park on a firm, flat and level surface; if not, park across a slope. Lower the bucket and dozer to the ground, remove the key, place the control lock levers in the locked position from the ignition and lock the cab door (if equipped), before you leave.

3. AFTER OPERATION

Before leaving the machine,
- Park the excavator on a firm, flat and level surface.
- Lower the attachments and the dozer blade to the ground.
- Stop the engine.
- Release pressure trapped in the hydraulic system.
- Lock all control levers.
- Remove the key.
4. SAFE OPERATING AND TRANSPORTATION OF THE EXCAVATOR

1. Observe all regulations concerning the transport of excavators on public roads.
2. Use adequately long and robust ramps when loading on the machine. (For details see "TRANSPORTING THE EXCAVATOR ON A VEHICLE")
3. Do not change the running direction and to avoid a tipping over, do not try to swing the attachment crosswise to the loading ramps.
4. Lower the attachment on the loading bed and release the pressure from the hydraulic system. After loading the excavator on the truck, block the tracks with blocks and cable down the excavator.

5. Avoid abrupt braking of the vehicle with the excavator loaded. Sudden braking cause the excavator to move and may cause a serious accident.
6. If the excavator is to tow another machine, make sure the load is smaller than the strength of the hook, tow chain or cable.

Max. drawbar pull at coupling hook 70450 N (15838 lbf, 7184 kgf)
Max. vertical load at coupling hook 7210 N (1621 lbf, 735 kgf)

7. Do not use hooks on the roof of canopy or CAB for lifting the excavator.

5. MAINTENANCE

Before doing maintenance work on the excavator, place the machine on even solid ground, lower the attachments to the ground, stop the engine and remove the key. When dismantling hydraulic parts, make sure that the hydraulic oil has cooled down sufficiently to avoid burns. Start maintenance work carefully, e.g. loosen plug slowly so that oil will not squirt out.

1. Before doing work on the engine, the exhaust system, the radiator and the hydraulics, let the excavator cool down sufficiently.
2. Turn off the engine at all times when filling with fuel. Avoid spilling and over-filling of fuel.
3. Smoking is prohibited while refueling or handling the battery. Keep sparks and fire away from the fuel tank and battery. Flammable gases escape from the battery, especially during charging.
4. Do not use or charge the refillable type battery if the fluid level is below the LOWER (lower limit level) mark. Otherwise, the battery component parts may be prematurely deteriorated, which may shorten the battery's service life or cause an explosion. Check the fluid level regularly and add distilled water as required so that the fluid level is between the UPPER and LOWER levels.
5. Read and follow the directions "STARTING WITH AN AUXILIARY BATTERY" in "OPERATION OF THE ENGINE", when starting with an auxiliary battery.
6. Keep a first-aid box and a fire extinguisher at hand at all times.
7. Do not open the radiator cap before the radiator has cooled down sufficiently. First loosen the cap to the first stop and allow the system enough time to release the remaining pressure. Then loosen the cap completely.
8. To avoid short-circuiting the battery, always remove the ground cable first and attach the positive cable first.
9. Leaking hydraulic fluid has enough pressure to penetrate the skin and cause serious injuries. Leakages from pin holes can be totally invisible. Do not use hands for checking for leaks. Always use a piece of wood or cardboard. It is strongly recommended to use a face mask or eye protection. Should injuries occur with leaking hydraulic fluid, contact a doctor immediately. This fluid can cause gangrene or serious allergic reactions.
10. To avoid environmental damage from acid and heavy metals, do not throw the battery away.
11. Observe all laws and regulations concerning the disposal of used oil, coolants, solvents, hydraulic fluids, battery acids and batteries.
12. To avoid fire, do not heat the hydraulic components (tanks, pipes, hoses, cylinders) before they have been drained and washed.
13. Use a face mask or eye protection to protect the eyes and respiratory system against dust and other foreign particles.

14. Securely support excavator with stands or suitable blocking before working underneath. For your safety, do not work under any hydraulically supported devices. They can settle, suddenly leak down, or be accidentally lowered.

15. Do not dismantle the spring of the track tensioner. If dismantling is necessary, contact your KUBOTA dealer where the machine was purchased, or competent service shop. The assembly must be done according to the work shop manual of KUBOTA (W.S.M.) for the product involved.

16. When lifting the machine itself with an attachment, place a safety block or safety post to prevent the machine from turning over. Keep the lock lever for attachment control in the “LOCK” position.

17. KUBOTA uses no parts which are lined with asbestos. Do not use these kind of parts even if they are available and can be installed.

18. Fire prevention
   Excavator and some attachments have components that are at high temperatures under normal operating conditions. The primary source of high temperatures is the engine and exhaust system. The electrical system, if damaged or incorrectly maintained, can be a source of arcing or sparks.

The following fire prevention guidelines will help to keep your equipment up and running efficiently and keep the risk of fire to a minimum.

- Blow off all accumulated debris near hot engine exhaust components such as turbocharger and exhaust manifold as well as exhaust pipes and muffler more frequently when working in severe conditions.
- Clean out all accumulated flammable debris such as leaves, straw, pine needles, branches, bark, small wood chips and any other combustible materials from inside the machine belly pans or lower unit structures as well as from area in proximity to the engine.
- Inspect all fuel lines and hydraulic hoses for wear or for deterioration. Replace them immediately if they begin to leak.
- Examine electrical wiring and connectors frequently for damage. Repair any wires that are loose or frayed before operating the machine. Clean all electrical connections and tighten all electrical connections as necessary.
- Inspect the exhaust system daily for any signs of leakage. Check for broken pipes and muffler and also for loose or missing bolts, nuts and clamps. If any exhaust leaks or fractured parts are found, repairs must be completed prior to operation.
- Always keep a multipurpose fire extinguisher on or near the machine. Be familiar with the operation of the fire extinguisher.
6. DANGER, WARNING AND CAUTION LABELS

(1) Code No. RC418-5728-4

TO AVOID PERSONAL INJURY:
1. Read and understand operator’s manual before attempting to start or operate the excavator.
2. Before starting engine, make sure all control levers are in neutral and the operating area is clear of all bystanders.
3. Never allow passengers on any part of the excavator while operating.
4. Know your work area before starting operation.
   • Look under and around the excavator.
   • Check overhead clearance with electric wires.
   • Check for hidden holes, obstacles or obstacles.
5. Make sure all loose parts are in place and securely fastened.
6. Never use the ladder or bucket to handle or clear hazards. Excavator is not intended for these purposes.

(2) Code No. RC418-5727-4

CAUTION

TO AVOID PERSONAL INJURY:
1. Drive the excavator only in the direction of the dozer blade when the dozer blade moves away from the operator.

(3) Code No. RC418-5733-5

DANGER

TO AVOID SERIOUS INJURY OR DEATH:
Check overhead clearance with electric wires.

(4) Code No. RD809-5738-2

WARNING

ATTACHMENT IMPACT HAZARD
KEEP ATTACHMENT AWAY FROM CAB AND MACHINE.
FAILURE TO DO SO MAY RESULT IN SEVERE INJURIES OR DEATH OR DAMAGE TO THE EXCAVATOR OR THE CAB.

(5) Code No. 6C300-4744-1

WARNING

Operation of this equipment may create sparks that can start fires around dry vegetation. A spark arrester may be required. The operator should contact local fire agencies for laws or regulations relating to fire prevention requirements.

(Canopy)

[1BAAAARAP089A]

(CAB)

[Right]

[Left]

[CAB]
(1) Code No. RC108-5765-2 [CAB]

**CAUTION**

TO AVOID PERSONAL INJURY:
MOUNT AND DISMOUNT SAFELY WHEN ENTERING OR LEAVING THE OPERATOR’S COMPARTMENT.

1. Maintain a three-point contact with the steps and handrails.
2. Face the machine.
3. Never jump on or off the machine.
4. Never attempt to mount or dismount a moving machine.
5. Never use control levers as handles.

(2) Code No. RC418-5732-3

**CAUTION**

TO AVOID PERSONAL INJURY:
1. Study control lever pattern A and pattern B. Then choose the one which is most familiar.
2. Position the pattern selector lever in either the lowered position (pattern A) or the upward position (pattern B).
3. Engage lever lock to prevent accidental pattern change.
4. Familiarize yourself with the pattern selected by operating slowly.

(3) Code No. RC418-5753-2

**CAUTION**

TO AVOID PERSONAL INJURY:
Lock control lever before leaving compartment.

(4) Code No. RC108-5718-1

**DANGER**

TO AVOID PERSONAL INJURY OR DEATH FROM A MACHINE RUNAWAY.

1. Do not start engine by shorting across starter terminals.
2. Start engine only from operator’s seat.
(1) Code No. RC418-5737-4
Keep away from fan and belt.

(2) Code No. RC418-5738-2
Do not touch hot parts such as exhaust etc.

(3) Code No. RD568-5754-1
TO AVOID SCALDING
Stop engine and allow radiator to cool before opening cap.

(4) Code No. RD358-5736-1
Diesel fuel only No fire

(5) Code No. 6C040-5559-1
DANGER EXPLOSIVE GASES
Cigarettes, flames or sparks could cause battery to explode. Always shield eyes and face from battery. Do not charge or use booster cables or adjust post connections without proper instruction and training.
KEEP VENT CAPS TIGHT AND LEVEL
POISON CAUSES SEVERE Burns
Contains sulfuric acid. Avoid contact with skin, eyes or clothing. In event of accidental fluid with water and call a physician immediately.
KEEP OUT OF REACH OF CHILDREN
(1) Code No. RC418-5725-1
Do not allow any persons within the working range.

(3) Code No. RD517-5795-2 [Both sides]

(6) Code No. RC108-5714-1

(2) Code No. 68328-5735-1 [Both sides]

(4) Code No. RD118-5737-1

(5) Code No. RC108-5796-1 [Both sides]
1. Keep danger, warning and caution labels, clean and free from obstructing material.
2. Clean danger, warning and caution labels with soap and water, dry with a soft cloth.
3. Replace damaged or missing danger, warning and caution labels with new labels from your KUBOTA dealer.
4. If a component with danger, warning and caution label(s) affixed is replaced with new part, make sure new label(s) is (are) attached in the same location(s) as the replaced component.
5. Mount new danger, warning and caution labels by applying on a clean dry surface and pressing any bubbles to outside edge.
Your KUBOTA dealer is always ready to help so that your excavator offers the best performance. After having carefully read these instructions, you will realize that much of the routine maintenance can be done by yourself. Your KUBOTA dealer is responsible for servicing and the delivery of spare parts. When ordering spare parts from your KUBOTA dealer, always mention the serial number of the excavator and the engine.

Note these numbers right away in the supplied lines.

| Left rad (deg) | 1.40 (80) |
| Right rad (deg) | 1.05 (60) |

#### Pressure connection for attachments

| Max. displacement (Theoretical) L (US gal)/ min | 49.5 (13.1) |
| Max. pressure Mpa (kgf/cm²) [psi] | 20.6 (210) [2987] |
| Fuel tank capacity L (US gal) | 45 (11.9) |

**NOTE:**
- Above dimensions are based on the machine with rubber tracks and JPN bucket.
- JPN = made in Japan
- Specifications subject to change without notice.
- With unloaded digging bucket.
- Firm compacted soil.
- Operators must exercise extra caution and follow instructions in the operator's manual.
- Worse condition or heavier attachment to the above will decrease climbing angle.

5. Service port switch
6. Working light switch
7. Service port activation switch
8. Display selector switch
9. Travel speed switch
10. Speed indicator light
11. Flow volume setting switch
12. Wiper / Washer switch (CAB type only)
13. Heater switch (CAB type only)
14. Interior lamp (CAB type only)
CABIN TYPE MACHINE

■ Wiper Switch
To move the wiper, turn on the switch for the wiper when
the starter key is in position "RUN". A further push on the
switch will activate the washer system. Even when the
wiper switch is in position "OFF", the washer switch
functions if it is pressed.
- Do not activate the washer switch if the tank for the
  cleaning fluid is empty; the pump can be damaged.
- Do not activate the wiper switch if the window is dry. In
  this case, make sure that cleaning fluid is applied to
  the pane before activating the wiper.
- In frosty conditions, make sure that the wiper blade is
  not frozen to the glass before switching-on. The motor
  can be damaged if the wiper system is used under
  such conditions.

■ Interior Lamp
To turn on the interior lamp, set the starter switch to the
"RUN" and then the interior lamp switch to the "ON"
positions, respectively.

■ Heater Switch
Turn the starter switch to position "RUN" and turn the
heater switch clockwise, the heater fan will be activated
and the cabin will start to warm up. The heater has two
positions -"Low" and "High"-.
IMPORTANT:
• During summer, turn the heater valve clockwise to close the valve.

NEW Recirculation / Fresh Air Selection knob
• FRESH AIR: Set the knob to the position, and fresh air will flow into the CAB. This is helpful when you work in a dusty conditions or if the glass windows get foggy.
• RECIRCULATION: Set the knob to the position, and the in-CAB air will be recirculated. This is useful for heating the CAB quickly or keeping it extra warm.

NOTE:
• When heating, do not keep the knob at the "RECIRCULATION" position for a long time. The windshield easily gets foggy.
• While working in a dusty conditions, keep the knob at the "FRESH AIR" position. This increases the pressure in the CAB, which helps prevent dust from coming into the CAB.

### Opening/Closing of CAB Door
1. Unlock the CAB door and pull the knob. Open the CAB door fully until fixed into place.
2. To close the CAB door, push the release lever down and close the door.
3. When leaving the excavator, always lock the door.
### Opening/Closing of Front CAB Window

**CAUTION**

To avoid personal injury:
- Keep hands and feet away from the area between front window and CAB frame. Otherwise the operator risks serious injuries by pinching or crushing.
- Other persons should stay away when opening the window.

To open and close the front window, take the steps below.
1. Release the lock levers on the top of the front window.
2. Hold the top and bottom grips tightly with both hands. Pull the top grip slightly upward and toward yourself to let the windshield slide inward.
3. Pull the windshield all the way to the rubber at the back of the CAB. Tighten up the lock levers.
4. To close the window, take the reverse steps 3, 2 and 1.

### Emergency Hammer

**CAUTION**

To avoid personal injury:
- When breaking the window pane, close your eyes and cover them with an arm.

Emergency hammer is for breaking window pane to escape urgently away from excavator as a result of window railing or locking mechanism failure.
Control Pedals and Levers

DEPICTED CONTENTS
(1) Throttle lever
(2) Drive lever (left)
(3) Drive lever (right)
(4) Control lever for front attachments (left)
(5) Control lever for front attachments (right)
(6) Dozer control lever
(7) Boom swing pedal
(8) Lock lever

IMPORTANT:
- When the lock lever pulled up prevents inadvertent machine movement.
DAILY CHECKS
In order to avoid damage, it is important to check the condition of the excavator before starting.

⚠️ CAUTION
To avoid personal injury:
- Do maintenance work on the excavator only on level ground with the engine off and the lock lever in the "Lock" position.

Checks
Go around the excavator and check for visual damage and wear.
Check coolant level. (See regular check points in the chapter on maintenance.)
Check fuel level.
Check engine oil level.
Check hydraulic fluid level.
Check air filter for clogging.
Check all grease points.
Check all control lamps, indicators, tachometer and hour meter.
Check the light system.
Check the seat belt and the ROPS / OPG (Top Guard Level I) safety device.
Check the condition of the safety and warning labels.
(See "DANGER, WARNING AND CAUTION LABELS" in "SAFE OPERATION".)
OPERATION OF THE ENGINE

CAUTION
To avoid personal injury:
- Read "SAFE OPERATION" at the beginning of this operator's manual.
- Obey the danger, warning and caution labels on the excavator.
- To avoid the danger of exhaust fume poisoning, do not operate the machine in a closed building without proper ventilation.
- Always start the engine from the operator's seat. Do not start the engine while standing next to the excavator. Before starting the engine, sound the horn to get the attention of persons standing nearby.

IMPORTANT:
- Do not use starting fluid or ether.
- In order not to overload the battery and starter, avoid engaging the starter more than 10 sec.
- When engine does not start in 10 sec., please wait 20 sec. or more, before attempting to restart.

STARTING THE ENGINE

CAUTION
To avoid personal injury:
- The operator should not depend solely on the warning lamps, but should always conduct the routine checks (see "MAINTENANCE").

Start the engine in the following manner:
1. Before starting the engine, make sure that all control levers are in the neutral positions.

2. Pull the lock levers all the way back. (lock position)
   - Put the throttle lever towards 

3. Insert the key into the starter switch and turn it to the position "Run". The glow lamp indicator will light up while the engine is preheated and will go out automatically after preheating is finished.

4. Turn the key to the position "START" and release after the engine has started.

5. Check if oil lamp and charge lamp have gone out. Should a warning lamp still be lit up, stop the engine then remove the key and check for the cause.
**Display Selector Switch**
Press the display selector switch. The LCD meter display will change from one indication mode to the other. Change the two-mode display according to your jobs.

**Charge Lamp**
This warning lamp lights up if the charging system fails the engine running. When the starter switch is turned "RUN" with the engine off, the lamp lights up, and when the engine gets started, the lamp goes out. If the lamp stays on with the engine running, stop the engine and check the fan belt.

**NOTE:**
- If there is disconnection or failure in the charging system when the key is turned to "RUN", the following symbol will appear.

**Oil Lamp**
The engine oil pressure warning lamp lights up due to failure of the lubricating system with the engine running. When the starter switch is turned "RUN" with the engine off, this lamp lights up, and when the engine starts, the lamp goes out. If the lamp stays on with the engine running, stop the engine and check the engine oil level.

**NOTE:**
- If there is disconnection, failure or breakdown in the lubricating system when the key is turned to "RUN", the following symbol will appear.

**Glow Lamp**
With the starter key at the "RUN" position, the engine's preheat status is indicated.

**NOTE:**
- When the starter switch is turned to the "RUN" position, the engine will be preheated for a given period of time and the lamp will turn on.
- The above indication appears momentarily when the engine is started, but it does not mean any trouble. (This is because the oil charge sensor output becomes unstable when the engine is started.)
- The symbol appears momentarily as the engine starts. This is not an error.
LCD Display for Normal Operation

* Fuel gauge

**CAUTION**

To avoid personal injury:
- Before adding fuel, be sure to stop the engine.
- Be sure to keep open flame away from the machine. Otherwise a fire may result.

With the starter key at the "RUN" position, the fuel remaining in the fuel tank is indicated in the block.

1. Press the work light switch or the display selector switch on the meter with the key OFF. (Keep the key at OFF.)

2. The message shown above appears.
3. Add fuel.
4. The buzzer sound interval changes according to the amount fuel added. As the fuel amount becomes close to full, the buzzer sound changes to continuous beeping.

* Water Temperature Gauge

**CAUTION**

To avoid personal injury:
- Do not open the radiator cap during or just after operation. Hot coolant may gush out and scald you. Wait for the coolant to cool down before opening the cap.

With the starter key at the "RUN" position, the cooling water temperature is indicated. If the water temperature indicator is near "H", take the steps below.
1. Discontinue the job.
2. Reduce engine rpm's to idle and keep it at idle for 5 minutes.
3. Stop the engine and check the following points (1)-(3).
   (1) Low coolant level or leak
   (2) Fan belt tension
   (3) Mud or dust deposits on radiator
◆ Hour-meter
Indicates the total operating hours of the machine.

How the indicator works
- The meter advances one hour after an hour of operation regardless of the engine rpm.

◆ Engine tachometer
Indicates the current rpm of the engine.

NOTE:
- The LCD display may be illegible when viewed from a certain angle. This is not a display failure.

■ LCD Display for Warning
◆ Remaining fuel warning
When the fuel level is very low, the ▲ lamp (yellow) starts flashing and the following message appears in the display.

◆ Battery charge warning
If the charging system fails, the ▲ lamp (red) starts flashing and the following message appears in the display.

◆ Engine oil pressure low warning
When the engine oil pressure drops too low, the ▲ lamp (red) starts flashing and the following message appears in the display. Immediately stop the engine and check the engine oil level.

■ Warning Lamp
The warning lamp is used to indicate broken wire, short-circuit, fuel shortage and other problems. The warning lamp starts flashing in red if any trouble occurs. If the system gets in warning signal, the warning lamp starts flashing in yellow.

IMPORTANT:
- Do not just look at the meter, but also carry out the inspection and correction accordingly.

NOTE:
- The warning lamp starts flashing in red if a serious problem occurs. If the system gets in warning signal, the warning lamp starts flashing in yellow.
- Warnings and errors are displayed and an alarm buzzer beeps.
- Let your KUBOTA dealer inform you of details concerning care and maintenance.

(1) Warning lamp (red, yellow)
(2) LCD display
Checkpoints after Starting the Engine

After starting the engine, but before starting operation, check the following points:

1. Put the throttle lever down and let the engine idle for approx. five minutes. This allows the engine lubricant to warm up and penetrate every part of the engine.

NOTE:
- This idling is usually called "Warm-up".

2. Once the engine has warmed up, check:
   - the warning lamp "Engine oil pressure" has gone out.
   - the warning lamp "Battery charge" goes out when engine speed is increased.
   - the color of the exhaust is normal and no abnormal noises or vibrations are heard or felt.
   - no fluid is leaking from pipes or hoses.

◆ Should any following conditions occur, stop the engine immediately.
   - The engine rpm's increases or decreases suddenly.
   - Sudden abnormal noises are heard.
   - Exhaust is black.
   - Warning lamp for engine oil lights up during operation.

IMPORTANT:
- In these cases, the excavator must be checked and serviced by your local the KUBOTA dealer.

STARTING THE ENGINE UNDER COLD CONDITIONS

CAUTION
To avoid personal injury:
- Make sure that the lock lever is in the lock position during warm up.

Start the engine in the following manner;
1. Pull the lock levers all the way back (lock position).
2. Turn the starter switch to the position "RUN" (glow position) and keep until the indicator lamp has gone out.
3. Move the starter switch to the position "START" to crank and start engine.
4. Release the starter switch after the engine has started; it will automatically return to the position "RUN".

IMPORTANT:
- Let the engine warm up after start-up for approx. 10 minutes under no load conditions. If the hydraulic fluid temperature is too low, the operation will be affected. Do not operate the excavator under full load until the engine has sufficiently warmed up.

STOPPING THE ENGINE

WARNING
To avoid personal injury or death:
- Do not keep the bucket or dozer in the lifted position, as a person could accidentally touch the levers and cause serious accidents.

1. After returning the engine to idle, turn the key to "STOP".
2. Remove the key.

Engine Stop Lever

CAUTION
To avoid personal injury:
- Keep hands away from rotating parts.

The engine stops when the key is turned off. If the engine does not stop, open the engine hood and push the stop lever back and hold it until the engine stops.
STARTING WITH AN AUXILIARY BATTERY

CAUTION
To avoid personal injury:
- Battery gases can explode. Do not smoke and keep sparks and flames away.
- Do not start the engine with an auxiliary battery if excavator battery is frozen.
- Do not connect the black jumper cable to the negative (-) terminal of the excavator battery.

Observe Following Guidelines when Starting with an Auxiliary Battery
1. Bring the helping machine with the same battery voltage as near as possible to the excavator. THE MACHINES MUST NOT COME IN CONTACT WITH EACH OTHER.
2. Bring the levers and pedal of both vehicles in the neutral position and put the lock lever in the "Lock" position.
3. Wear eye protection and rubber gloves.
4. Ensure the vent caps are securely in place (if equipped).
5. Cover the battery opening with a cloth. Make sure that the cloth does not touch the battery terminals.
6. Connect the terminal of the red jumper cable with the plus (+) terminal of the low battery and connect the other end of the cable to the plus (+) terminal of the auxiliary battery.
7. Connect the black negative cable to the minus (-) terminal of the auxiliary battery.
8. Connect the other end of the black cable (coming from the auxiliary battery) to the excavator frame as far away as possible from the low battery.
9. Start the engine of the helping machine and let it run for a while. Start the excavator with the low battery.
10. Disconnect the jumper cables in the reverse sequence (Steps 8, 7, 6).
11. Remove the cloth and replace the vent caps.

IMPORTANT:
- This excavator has a negative (-) ground 12 Volt starting system.
- Only use the same voltage when using an auxiliary battery.
- Using a higher voltage will cause serious damage to the electrical system. When using an auxiliary battery, only the compatible (same) voltage is permissible.
RUNNING-IN OF THE NEW EXCAVATOR
The operation and care of the new excavator influences its life span. Your new excavator has been carefully checked and tested before leaving the factory. In spite of this, all movable components must run-in during the first 50 work hours. Do not work with full rpm's and full loads during this period. It is most important to run-in your excavator properly in order to achieve its full performance and longevity. During the running-in, the following points should be adhered to in all cases.

Do not Work with Full Engine Rpm's or Full Loads during the First 50 Working Hours
- Let the engine warm up sufficiently in the cold season.
- Do not let the engine rev-up more than necessary.

Oil Change in the Run-in Stage
The lubrication oil plays a specific and important role during the run-in phase of the excavator. The numerous movable parts are not yet run-in, so many fine metal particles are generated and cause damage and shorten the life of many components. Pay attention to the oil-change intervals and complete them sooner than later. See "REGULAR CHECKS AND MAINTENANCE WORK" section for more details on the oil-change intervals.

Seat Belt

WARNING
To avoid personal injury or death:
- Always use the seat belt with a ROPS/OPG (Top Guard Level I) protection structure. Adjust the seat to the optimal position and buckle up.

CAUTION
To avoid personal injury:
- Make sure that the seat is completely secured after each adjustment.
- Do not allow any person other than the driver to ride on the excavator.

STARTING

1. Adjusting the Operator's Position.

Operator's Seat

**CAUTION**

To avoid personal injury:
- Make sure that the seat is completely secured after each adjustment.
- Do not allow any person other than the driver to ride on the excavator.

Seat Belt

**WARNING**

To avoid personal injury or death:
- Always use the seat belt with a ROPS/OPG (Top Guard Level I) protection structure. Adjust the seat to the optimal position and buckle up.

**CAUTION**

To avoid personal injury:
- Make sure that the seat is completely secured after each adjustment.
- Do not allow any person other than the driver to ride on the excavator.

**CAUTION**

To avoid personal injury:
- Always use the seat belt with a ROPS/OPG (Top Guard Level I) protection structure. Adjust the seat to the optimal position and buckle up.
◆ Height adjustment
Pull up with your hands the seat pan in front of seat belt to the desired height of the three available positions.
Once it has reached the highest level, it will return to the lowest level.

2. After starting the engine, bring the lock levers into the "Unlock" position to use drive lever or control lever for front attachments.

■ Lock Lever

⚠️ CAUTION
To avoid personal injury:
- To avoid injuries, check safety features all around the excavator.

NOTE:
- With the lever lock pulled down, the engine fails to start.

If you try to start the engine with the key with the lock lever down, the following message appears momentarily on the meter display.

■ Working Light Switch
When the starter switch is in position "RUN", the light(s) can be switched on by pressing the switch.

■ Night operation

⚠️ CAUTION
To avoid personal injury:
- Visibility is reduced in darkness, therefore the work light alone may not be enough. In which case, prepare additional stationary artificial lighting, observe safety rules as well as special regulations for night work.

■ Travel Buzzer (Option)
When you handle the drive levers, the buzzer sounds at the same time or before the excavator starts to run.
DRIVING

WARNING
To avoid personal injury or death:
- Before starting the engine, make sure that no one is near the excavator.
- Before operating the excavator, check the track direction. (Front idler and dozer blade to the front of the excavator).

- Use extra caution when traveling across a slope or working sideways on a slope.

- Take precautions against tipping over. Stay away from steep slopes and embankments. Do not swing the bucket downhill. Lower the dozer blade when digging. Keep the bucket as low as possible while driving uphill. Turn slowly on slopes (at reduced speed). Do not place the excavator near the edges of trenches and banks, as the earth can give away due to the weight of the excavator.

ALLOWABLE CLIMBING ANGLE : 36 % (20 deg.)
ALLOWABLE ANGLE CROSS : 27 % (15 deg.)

- Recommended technique for working on a slope.

1. Adjust the engine speed from idling to an intermediate speed.
2. Unlock the lock levers and pull in the bucket and hold the bucket about 20 to 40 cm (8 to 16 in.) above the ground.
3. Activate the dozer control lever to raise the dozer.

**Drive Levers (Right,Left)**

**WARNING**

To avoid personal injury or death:
- If the swing frame has been turned 180 deg, i.e. the dozer in relation to the operator's seat is "behind", then the travel direction is opposite to the drive direction of the levers (when activating the drive lever forward, the machine, in relation to the operator's seat, will move backward).

Pushing the drive lever forwards, moves the excavator forwards, and vice-versa. The front of the excavator is the side where the dozer is located; the drive sprocket is in the rear of the excavator.

**Travel Speed Switch**

Travel speed will increase when this switch is pushed down.

Switching the dual travel speed:
1. Press the travel speed switch. The buzzer beeps and the travel speed changes from first speed to second. The symbol lights up.
2. Press the travel speed switch again, and the buzzer beeps and the travel speed changes from second speed to first. The symbol light goes out.

**NOTE:**
- When activating the travel speed switch, it must be pushed down completely.
- Each time the travel speed switch is pressed, the travel speed is switched between first and second.

**IMPORTANT:**
- Do not activate the travel speed switch when there is increased drive resistance (e.g. driving on inclines or on uneven grounds).
- If the tracks are clogged with sand or gravel while working on soft ground, lift up both tracks with the help of the boom, arm, dozer blade and bucket and let the track rotate to remove the sand and gravel.
EXCAVATOR OPERATION

TURNS

⚠️ CAUTION
To avoid personal injury:

- Do not change direction on steep slopes, or the excavator could tip over.
- Before changing direction, beware of people in the work area.

■ Pivot Turn

NOTE:
- Movement as illustrated is done with the dozer blade in front of the operator.

◆ Change of Direction while Travelling
1. While travelling forward, bring the left drive lever into the neutral position; the excavator will turn in the direction of the arrow of the illustration below.

2. While travelling backward, bring the left drive lever into the neutral position; the excavator will turn in the direction of the arrow of the illustration below.
◆ Change of Direction while Stationary
1. Push the left drive lever forward; the excavator will turn in the direction of the arrow of the illustration below.

2. Pull the left drive lever backward; the excavator will turn in the direction of the arrow of the illustration below.

■ Spin Turn
When both drive levers are activated in the opposite directions, both tracks will rotate with the same speed but in opposite directions. The center of rotation is the center of the excavator.

(A) "Left spin turn"

(A) "Right spin turn"
UP AND DOWNHILL DRIVING

⚠️ CAUTION
To avoid personal injury:
- When travelling up or down a slope, use extra caution and follow the instructions below.

While traveling uphill, keep the lower edge of the bucket approx. 20 to 40 cm (8 to 16 in.) above the ground. Although the KUBOTA excavator will not slip easily because of the tracks, it is safer to let the bucket slide over the ground while traveling downhill. Always choose slow speed for uphill and downhill traveling.

[UPHILL TRAVELING]

![Uphill Traveling Diagram]

(A) 20 to 40 cm (8 to 16 in.)

[DOWNHILL TRAVELING]

![Downhill Traveling Diagram]

OPERATION OF THE DOZER

1. To raise the dozer, set Dozer and Track selection lever in position of Dozer and pull back the control lever. Pushing the control lever forwards, lowers the dozer.

![Dozer Control Lever Diagram]

(1) Dozer control lever
(A) “Raise”
(B) “Lower”

2. While undertaking earth moving work, control both drive levers with the left hand and the dozer control lever with the right hand.
TWO PATTERN SELECTION SYSTEM (TPSS)

⚠️ CAUTION
To avoid personal injury:
- Study control lever pattern A and pattern B.
  Then choose the one which is most familiar
- Position the pattern selector lever (located on the right side of operator's seat) in either the lower position (pattern A) or the upper position (pattern B).
- Engage the lock lever to prevent accidental pattern change.
- Familiarize yourself with the pattern selected by operating slowly.

Pattern Change
1. Loosen the lever lock knob (2) and slide it to the direction (a), and position the pattern selector lever (1) to the desired position.
2. Slide the lever lock knob (2) to the direction (b) and tighten it.

</tbody>
</table>

(1) Pattern selector lever
(Two Pattern Selection System: TPSS)
(2) Lever lock knob
(3) Pattern A
(4) Pattern B
OPERATION OF THE BOOM
To raise the boom, pull the attachment control lever back. The boom is equipped with a cushion cylinder which helps prevent excavated material in the bucket from falling out. Low hydraulic oil temperature, (e.g. after starting the engine in cold weather) the cushioning function will be effected for a short period of time (approx. 3 to 5 seconds). This condition results from the viscosity of the hydraulic oil and is not a sign of malfunction. The cushion cylinder will operate normally as the oil warms up. To lower the boom, push the attachment control lever forward.

OPERATION OF THE ARM
Pull back the attachment control lever and the arm will be pulled in. To move the arm out, push the control lever towards the front.

NOTE:
● When pulling in the arm, the movement may stop for a short moment when the arm is in its vertical position. This is caused by the combined load of the arm and bucket moving the cylinder piston away from the hydraulic flow causing a delay in the cylinder action, until the flow catches up with cylinder piston. This is a characteristic of the hydraulic system and is no sign of a malfunction.

IMPORTANT:
● When lowering the boom, make sure that it does not hit the dozer and that the bucket teeth do not touch the dozer.
OPERATION OF THE BUCKET
To dig using the bucket, move the right attachment control lever from the neutral position leftward. Moving the control lever rightward moves the bucket outwards and empties its contents.

UNIT SWING AND BOOM SWING OPERATION

CAUTION
To avoid personal injury:
- When working in groups, always let the others know what you are going to do before you do it.
- Keep others away from the machine working area.
- Be sure to lock the boom swing pedal when the boom swing function is not used.

Unit Swing Operation
1. Move the control lever to the left and the upper structure will turn to the left.
2. Move the control lever to the right and the upper structure will turn to the right.

Boom Swing Operation
1. Flip the pedal lock up to unlock the pedal.
2. Step on the left side of the pedal to swing the boom to the left.
3. Step on the right side of the pedal to swing the boom to the right.

IMPORTANT:
- Do not operate the left attachment control lever abruptly from right to left (or vice versa). Because the low of inertia cause high impact load on the swing gear and the swing motor, shortening the life of the excavator.
SERVICE PORT OPERATION

NOTE:
- When the lock lever is raised, the service port activation switch is off.
- Let the engine warm up after start-up for approx. 10 minutes under no load conditions.

Service Port Operation
This knob is used to operate hydraulic attachment such as breakers.
◆ Usual settings

**Action mode of service port operation**

It is possible to select from four action modes of the service port operation by pushing the service port activation switch. Each time the service port activation switch is pushed, the action mode changes from 1 through 4.

<table>
<thead>
<tr>
<th>Action Mode</th>
<th>Lighting</th>
<th>Flow Volume</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mode 1</td>
<td>No lighting</td>
<td>No activation</td>
</tr>
<tr>
<td>Mode 2</td>
<td>Continuous lighting</td>
<td>Max flow volume (Theoretical volume 49.5 L (13.1 US gal) / min.)</td>
</tr>
<tr>
<td>Mode 3</td>
<td>Slow blinking</td>
<td>Limited flow volume (Theoretical volume can be limited.)</td>
</tr>
<tr>
<td>Mode 4</td>
<td>Fast blinking</td>
<td>One way flow (Send oil to the port 2 only.)</td>
</tr>
</tbody>
</table>

**NOTE:**
- When turning the starter key to the "RUN" position, the action mode will return to the last action mode used.

◆ Initial setting of limited service port flow volume (Make this setting first.)

<table>
<thead>
<tr>
<th>Action Mode</th>
<th>Lighting</th>
<th>Flow Volume</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mode 1</td>
<td>No lighting</td>
<td>No activation</td>
</tr>
<tr>
<td>Mode 2</td>
<td>Continuous lighting</td>
<td>Max flow volume (Theoretical volume 49.5 L (13.1 US gal) / min.)</td>
</tr>
<tr>
<td>Mode 3</td>
<td>Slow blinking</td>
<td>Limited flow volume (Theoretical volume can be limited.)</td>
</tr>
<tr>
<td>Mode 4</td>
<td>Fast blinking</td>
<td>One way flow (Send oil to the port 2 only.)</td>
</tr>
</tbody>
</table>
**Setting of limited flow volume**

Max. flow volume right 1 and left 2 can be adjusted in 15 stages independently.

1. Turn the starter key to the "RUN" position while pushing the flow volume setting switch. Release the hand from the switch after the engine starts.

2. The message like left will appear on the LCD display and Max. flow volume right 1 can be adjusted.

3. The flow volume supplied from port 1 (right) is adjusted properly with the working light switch or the service port activation switch while operating the hydraulic attachment.

- When the working light switch is pushed, the flow volume is decreased.
- When the service port activation switch is pushed, the flow volume is increased.
4. After Max. flow volume right 1 is set, push the display selector switch.

5. The message like left will appear on the LCD display and Max. flow volume left 2 can be adjusted.

6. The flow volume supplied from port 2 (left) is adjusted properly with the working light switch or the service port activation switch while operating the hydraulic attachment.

   - When the working light switch is pushed, the flow volume is decreased.
   - When the service port activation switch is pushed, the flow volume is increased.

**NOTE:**
- When Max. flow volume right 1 is adjusted again, the display selector switch is pushed and the operation of 3 is repeated.

7. After Max. flow volume right 1 and left 2 is set, turn the starter key to the “STOP” position once. Then turn the starter key to the “RUN” position again.

---

### Service Port Max. Flow Volume

<table>
<thead>
<tr>
<th>Max. Flow Volume (Theoretical L (US gal) /min.)</th>
<th>49.5 (13.1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Max. pressure MPa (kgf/cm³) [psi]</td>
<td>20.6 (210) [2987]</td>
</tr>
</tbody>
</table>
IMPORTANT:
• When the service port is not used for a long period, dirt particles can settle in the lower part of the service port lines. When the plugs on the service port lines are removed to connect attachments, drain approx. 100 cc (3.4 oz) of oil per side before making connections. For breaker choices, contact your dealer.

NOTE:
• Suppose that the same attachment is mounted on another machine. Even if the same limit setting is made, the same speed cannot be achieved. Make an optimum setting on each machine.
• The service port speed fluctuates by getting an attachment relieved at the limited flow volume. Determine the limit level with combined operations of attachments in mind.

One Way Flow Operation

1. Push the one way hold lock switch **A**, and oil flows into the port **2** continually. Push the switch **A** again to stop the operation.

2. The one way flow operation stops when the first service port switch is pushed.

**A** : ONE WAY HOLD LOCK SWITCH
PARKING ON A SLOPE

**WARNING**

To avoid personal injury or death:

- When the excavator is parked or left unattended on a slope, be sure to put the bucket on the ground and place all control levers in neutral position, then brace the tracks with chocks.

---

**IMPORTANT INFORMATION ON EXCAVATOR OPERATION**

- Do not try to crush concrete or boulders using side swings with the bucket. Also avoid using side sweeps of the bucket to move earth piles.
- Under all circumstances avoid the following operations:
  - Excavation using the gravitational impact of the machine.
  - Compacting of gravel or soil using the dropping action of the bucket.
  - Excavation using the traveling power of the machine.
- Do not try to drop or shake off soil adhering to the bucket in the manner given in the points below. This can cause damage to the machine. Adhering soil can be shaken off when the bucket is being emptied by moving the bucket out to the maximum stroke of the cylinder. Should this not suffice, swing out the arm as far as possible and operate the bucket back and forth.
- Do not hit the dozer with the boom cylinder! Make sure that the boom cylinder does not hit the dozer when doing deep excavation. If necessary swing around so that the dozer is in the back of the machine.
- Pay attention when pulling in the bucket! When pulling in the bucket (for driving or transportation) avoid hitting the dozer.
- Avoid collisions!
  When moving the excavator, pay attention that the dozer does not collide with obstructions such as boulders, etc.
  Such collisions shorten the life of the dozer and the cylinder substantially.
- Support the machine correctly!
  When stabilizing the machine with the dozer, lower the dozer to engage the full width on the ground.
- If the water or mud level reaches higher than the top of the tracks, the swivel bearing, swivel motor gear and ring gear may be exposed to mud, water and other foreign objects.
  The excavator must be properly pressure washed after each use.
  - Thoroughly clean the area around the swivel bearing, swivel motor gear and ring gear to remove foreign objects.
  - Inspect the swivel motor oil sump (if equipped) for water contamination. If water is present, refer to operator's manual for lubricant replacement procedure.
  - Refer to operator's manual for proper swivel bearing, swivel motor gear and ring gear lubrication procedures.
  - Reinstall any protective covering if removed earlier.

---

**PUTTING THE FRONT PARTS TO THE GROUND**

**CAUTION**

To avoid personal injury:

- Do not get near the machine when the front part is not on the ground.

Within about a minute after stopping the engine, the front parts can be put to the ground without restarting the engine.

Unlock the lock lever for attachment control while having turned on the starter switch and push the control lever (right).

**HOW TO RELEASE PRESSURE TRAPPED IN THE HYDRAULIC SYSTEM**

- Lower the attachments and the dozer blade to the ground.
- Turn the key to "STOP" position and shut off the engine.
- After stopping the engine, turn the key to "RUN" position.
- Release pressure in the hydraulic system by operating levers with lever lock pulled down.
- When the pressure of the service port lines is released, turn on the service port activation switch and move the service port switch to right and left.
TRANSPORTING THE EXCAVATOR ON A VEHICLE

DANGER
To avoid personal injury or death:
- No directional changes should be made when the excavator is on the ramp. Should a change of direction be necessary, drive off the ramp completely and make the turn.
- When driving forwards or backwards onto the vehicle, or when swinging the upper body, make sure that neither the CAB or the gates of the vehicle will be damaged.

WARNING
To avoid personal injury or death:
- After loading the machine on the truck, lower the bucket and dozer onto the truck bed.

Transporting on a truck

Prepare a platform to load or unload the excavator.
Take following steps when using ramps.
1. Apply the parking brakes of the vehicle, and block the drive wheels from both sides.

2. Use mounting brackets to secure the ramp properly. Connect the ramps directly to the bed.

3. For additional safety, use blocks or supports under the ramps and the bed.

- When the excavator reaches the point between the ramps and the bed, halt and then move very slowly until the excavator reaches the horizontal position.
- Move the excavator onto the vehicle only with the arm completely pulled in.
- Do not jack up the machine using its boom to load or unload the excavator from the vehicle. Doing this is dangerous. Otherwise the CAB of the vehicle could be damaged when swinging around the upper body.
- Make sure the ramps are of sufficient capacity and securely connected to the vehicle to safety support the machine throughout the loading / unloading operation.
4. Align the ramps and the tracks and then drive the excavator slowly up the ramps. After ensuring that the tracks are completely on the bed, swing the upper body around to the back of the vehicle.

5. Block the tracks and cable down the excavator with suitable chains and approved method (check appropriate state regulation).

6. Before unloading, raise the dozer and bucket from the bed.
DANGER
To avoid serious injury or death:
- The correct instructions for safe handling are described here. Read these instructions carefully before moving the machine. Make sure that the operating personnel read the operator’s manual carefully.

Basics when Lifting with Cables or Straps
1. The lifting and crane operation is to be undertaken according to the safe operation guidelines described.
2. The equipment used for lifting mentioned in these instructions are only given as reference, the standards concerning strength, control and other details are based on the respective applicable guidelines.

Safety Aspects when Lifting with Cables or Straps
Abide by following steps when lifting:
1. Do not lift loads that exceed the maximum load capacity of the crane.
2. Choose correct equipment suitable to the weight, size and form of the load.
3. First assess the center of gravity of the load, position the hook directly over the load and lift the load so that the center of gravity of the load is as low as possible.
4. The steel cables or straps must be fixed in the middle of the hook.
5. The load must be lifted vertically from the ground.
6. Do not enter the working area under suspended loads and do not move the load over people. The load must only be moved in an area where the balance can be easily maintained.

Lifting Procedure for the Excavator

WARNING
To avoid personal injury or death:
- Do not use the hooks on the roof of canopy and CAB for lifting the excavator.
- Never lift the machine with the angle blade placed at an angle.

General guidelines for lifting
1. Lifting position. (see the following illustration.)
   (1) Pull in the boom completely towards the CAB.
   (2) Pull in the arm completely.
   (3) Pull in the bucket completely.
   (4) Adjust the swing angle to the center. (to bring the boom in a position parallel to the machine frame)
   (5) Swing frame so that dozer blade is to the rear and frame is parallel with tracks.
   (6) Raise the dozer blade fully.
2. Attaching the steel cables or straps.
   (1) Always hook the excavator at three points. (one on the boom and left and right of the dozer)
   (2) Always use a shackle on each lifting hole when attaching the cables or straps.
   (3) Using protective material at all places where the cables or straps contact the machine.
   (4) Keep the angle between the front and rear cables or straps within 60° (1.05 rad.).
3. Tackle
The weights of the excavators and the recommended tackle for lifting these loads are mentioned in the following table. Choose components which meet or exceed the requirements of the table.

<table>
<thead>
<tr>
<th>Excavator Weight*</th>
<th>2930 kg (6460 lbs)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Load / Cable</td>
<td>11050 N (2490 lbf)</td>
</tr>
<tr>
<td>Minimum Cable Diameter (Safety factor=6)</td>
<td>12.5 mm (0.5 in.) or more</td>
</tr>
</tbody>
</table>

*Excavator Weight: With CAB, and long arm.
Steel cable: 6 x 24

4. Lifting
(1) Lift slowly and safely
(2) Do not enter the excavator area when lifting.
(3) Lift the excavator horizontally. (Modify cable or strap connections according to needs)

**Maximum strength**
for example : (JIS G 35 25) - "6 x24"

<table>

</table>

**IMPORTANT:**

*1  When using a hydraulic breaker, change hydraulic oil and return filter according to the table on “Hydraulic Oil Change (Including Exchange of the Suction Filter in the Hydraulic Tank)” under "EVERY 1000 SERVICE HOURS" in the chapter "REGULAR CHECKS AND MAINTENANCE WORK”.

*2  Clean and replace the air filter more frequently if used under dusty conditions. When the filter is very dirty from dusty conditions, replace the filter.

*3  Replace only if necessary.

*4  Consult your local KUBOTA Dealer for this service.

The items listed above (@ marked) are registered as emission related critical parts by KUBOTA in the U.S.EPA non-road emission regulation. As the engine owner, you are responsible for the performance of the required maintenance on the engine according to the above instruction. Please see the Warranty Statement in detail.
OPENING AND CLOSING OF PARTS

■ Opening and Closing of the Fuel Tank Cap

1. To open the tank cover, insert the starter key and turn counterclockwise.

2. To close the tank cover, put it down and turn the starter key clockwise.

■ Opening/Closing of the Engine Hood

**CAUTION**

To avoid personal injury:
- Do not open the engine hood with the engine running unless in an emergency.
- Do not touch the exhaust muffler or the exhaust pipe; serious burns can occur.

Insert the key into the key slot and turn it clockwise to open the hood. To close it, lower the hood and push it tightly. Turn the key counterclockwise to lock the hood.
Where to store the Grease Gun (Option)

(1) Grease gun (Option)

Where to keep Operators Manual

(1) Operator's manual storage

DAILY CHECKS

CAUTION
To avoid personal injury:
- Do not operate the excavator while putting out the hands and the body from the windows.
- Do not touch the control levers and the pedals from outside the cab during the engine running.

For your own safety and to assure the long life of your machine, a careful check should be made before each operation.

Checking Coolant Level

CAUTION
To avoid personal injury:
- Move the excavator to even ground.
- Make sure that the engine is turned off.
- Do not open the radiator cap right after the engine has been stopped; Serious burns can occur from contact with escaping hot coolant fluid.
- Check the coolant level in the recovery tank only after the engine has cooled down.
- Remove the radiator cap only if absolutely necessary.

1. Check to see that the coolant level is between the "FULL" and "LOW" marks of the recovery tank.
2. When the coolant level drops due to evaporation, add water only up to the full level.
   In case of leakage, add anti-freeze and water in the specified mixing ratio up to the full level.
   (See "Changing Radiator Coolant" in every 2 years maintenance.)

1. Recovery tank
   (A) "FULL"
   (B) "LOW"

IMPORTANT:
- Do not fill the recovery tank over the "FULL" marking.
- Do not fill with dirty or salty water.
Checking Fuel Level

**CAUTION**
To avoid personal injury:
- Stop the engine and remove the key before fuelling.
- Do not smoke while fuelling.

**IMPORTANT:**
- When temperatures are over -7°C (20°F), use No.2-D diesel fuel, when temperatures are under -7°C (20°F), use No.1-D diesel fuel or a blend of No.2 and No.1 diesel.
- Make sure that the fuel tank is not run empty. Air will enter the fuel system, and must be purged before restarting.
- See "PURGING OF THE FUEL SYSTEM" in "OTHER ADJUSTMENTS AND REPLACEMENTS"
- To prevent condensation (water) accumulations in the fuel tank, fill the fuel into the tank before parking overnight.

1. Turn the starter key to the position "RUN".

**NOTE:**
- With the starter key at the "STOP" position, press the electronic meter's display selector switch or the working light switch, and the LCD display shows the hour meter, fuel gauge and water temperature gauge for 10 seconds.

2. Check the fuel level by the fuel level indicator.

3. If necessary, open the tank cover with the starter key, open the cap and add fuel.
- See "Opening and Closing of the Fuel Tank Cap" and see Fuel supply in the "LCD Display for Normal Operation" section.

![Image](1BAAAARAP080A)

![Image](1BAAAARAP082S)

(1) Fuel gauge

(A) "EMPTY"

(B) "FULL"
### Checking Engine Oil Level

**CAUTION**
To avoid personal injury:
- Stop the engine and remove the key before checking the oil level.

**IMPORTANT:**
- Use engine oil with the correct viscosity. (according to the outside temperature)
- After stopping the engine and remove the key, wait five minutes, then check oil level. (Excavator must be on level ground.)

Insert the engine oil dipstick fully into the respective port opening, remove again and check the oil level; if necessary fill with oil. The machine must be on level ground when checking the oil level.

![Diagram of engine oil dipstick](image1)

1. **Oil filing port**

![Diagram of engine oil dipstick](image2)

1. **Engine oil dipstick**

(A) **Required oil level range**

### Checking Hydraulic Oil Level

**CAUTION**
To avoid personal injury:
- Stop the engine and remove the key before checking the oil level.

**IMPORTANT:**
- Before filling oil, wipe away all sand and dust from around the oil port. Make sure to use an identical type of hydraulic fluid.
- The excavator has been filled with hydraulic fluid before delivery. See "RECOMMENDED OILS". (Do not mix different oils.)

1. Park the excavator on a firm, flat and level surface. Lower the attachments and dozer blade to the ground and stop the engine.

2. Check the oil level as to whether it lies on the center of the gauge at normal temperature (10 to 30°C (50 to 80°F)).

3. Enough oil is present if the oil level lies near the center of the gauge.

4. Should the oil level be too low, fill oil through the oil port before starting the engine. This step is important for the protection of the hydraulic system.

![Diagram of hydraulic oil port](image3)

1. **Tank cap**

2. **Gauge**
Lubrication Points

CAUTION
To avoid personal injury:
- First lower all attachments to the ground then stop the engine and remove the key.
- While greasing, take caution not to step on the bucket teeth.
- When doing excavation work in water, generously grease the following points. After ending work, grease again.

Grease the marked grease fittings shown by arrows in the illustration below.

1. Boom bottom linkage............................. 1 place
2. Arm bottom linkage................................. 1 place
3. Bucket link pin........................................ 3 places
4. Boom cylinder pin and boss....................... 2 places
5. Arm cylinder boss..................................... 2 places
6. Bucket cylinder boss............................... 1 place
7. Fixing pin between arm and bucket.............. 1 place
8. Boom swing fulcrum.................................. 1 place
9. Swing cylinder bottom............................. 1 place
10. Swing pin............................................ 2 places
11. Dozer cylinder boss............................... 2 places
12. Dozer linkage pin................................... 2 places
Check Fan Belt

**CAUTION**
To avoid personal injury:
- Stop the engine and remove the key before checking the fan belt.
- Check the fan belt for cracks and proper tension. (See "Checking Fan Belt Tension" in "REGULAR CHECKS AND MAINTENANCE WORK" section.)

Checking Radiator and Oil Cooler

**CAUTION**
To avoid personal injury:
- Always stop the engine and remove the key before checking the radiator.
- Wear eye protection when cleaning with compressed air.

1. Check if the fins and ribs are clogged. If so clean with compressed air or steam.
2. Check the rubber hoses for damage and replace if cracked or old. Check if the hose clamps are tight enough.

Checking Washer Liquid (only for CAB type)

If the windows washer is switched on with the washer liquid tank empty, the motor may be damaged. Always keep the tank filled.

Checking and Cleaning Engine and Electrical Wiring

**CAUTION**
To avoid personal injury:
- Always stop the engine and remove the key before cleaning the wiring, cables and engine.

Before starting, check whether flammable substances have gathered on the battery, the cables and wiring, the muffler or on the engine. Remove thoroughly. Check the electrical circuitry for disconnections, shorts or loose terminals.

Washing Whole Machine

**IMPORTANT**:
- Do not wash the excavator with the engine running. Water could enter the air filter and damage the engine. Make sure that the air filter is kept dry.
- Remove the mud before washing the machine.
**REGULAR CHECKS AND MAINTENANCE WORK**

**CAUTION**
To avoid personal injury:
- Do not operate the excavator while putting out the hands and the body from the windows.
- Do not touch the control levers and the pedals from outside the cab during the engine running.

**EVERY 50 SERVICE HOURS**

**Draining the Water from the Fuel Tank**

**CAUTION**
To avoid personal injury:
- Before draining the water from the fuel tank, be sure to stop the engine and remove the key.
- Do not smoke during inspection.

1. Remove the drain plug on the underside of the body and drain water.
2. Re-tighten the drain plug.

**Draining Water Separator**
1. Open the hood.
2. When the separated water is being drained, the red float moves upwards. When the float reaches the line, close the shutoff-valve so that no fuel can run out. Now loosen the ring nut, and remove the cup and empty completely.
3. Finally, do not forget to open the shutoff-valve and close the hood.

**Greasing Swing Bearing Teeth**
1. Pump grease with grease gun through the grease fitting (at the right end side).
2. Grease at each 90° (1.58 rad.) position of the swing frame.
3. Fill with approx. 50g of grease (approx. 20 to 30 pumps with the grease gun at each position).
Battery

⚠️ DANGER
To avoid the possibility of a battery explosion:
For refillable type battery, follow the instructions below.
- Do not use or charge the refillable type battery if the fluid level is below the LOWER (lower limit level) mark. Otherwise, the battery component parts may prematurely deteriorate, which may shorten the battery's service life or cause an explosion. Check the fluid level regularly and add distilled water as required so that the fluid level is between the UPPER and LOWER levels.

⚠️ CAUTION
To avoid personal injury:
- Never remove the vent caps while the engine is running.
- Keep electrolyte away from eyes, hands and clothes. If you are spattered with it, wash it away completely with water immediately and get medical attention.
- Wear eye protection and rubber gloves when working around the battery.
- Before inspection or dismounting the battery, be sure to turn off the engine and turn the starter switch to the "OFF" position.
- When removing the battery, always disconnect the negative ground cable first. When installing a battery, always connect the ground cable last. This prevents a possible explosion caused by sparks.
- Always wear eye protection when working with the battery.

1. Remove the battery from the storage and check the battery fluid level and add distilled water if necessary. Open the side cover, check the battery fluid level and add distilled water if necessary.
2. Clean the battery caps (ventilation holes) also.
**Battery Charging**

**CAUTION**
To avoid personal injury:
- When the battery is being activated, hydrogen and oxygen gases in the battery are extremely explosive. Keep open sparks and flames away from the battery at all times, especially when charging the battery.
- When charging battery, make sure battery vent plugs are secured.
- When disconnecting the cable from the battery, start with the negative terminal first.
  When connecting the cable to the battery, start with the positive terminal first.
- Do not check battery charge by placing a metal object across the terminals.
  Use a voltmeter or hydrometer.

1. Make sure each electrolyte level is to the bottom of vent wells. If necessary, add distilled water in a well-ventilated area.
2. The water in the electrolyte evaporates during recharging. Liquid shortage damages the battery. Excess liquid spillage damages the excavator.
3. To slow charge the battery, connect the battery positive terminal to the charge positive terminal and the negative to the negative, then recharge in the standard fashion.
4. A boost charge is only for emergencies. It will partially charge the battery at a high rate and in a short time. When using a boost-charged battery, it is necessary to recharge the battery as early as possible. Failure to do this will shorten the battery’s service life.
5. When the specific gravity of electrolyte falls between 1.27 and 1.29 charge has completed.
6. When exchanging an old battery for a new one, use a battery of equal specification.

**EVERY 200 SERVICE HOURS**
Do all 50 hour servicing at the same time.

**Checking Fan Belt Tension**
- Check and adjustment of the fan belt tension

**CAUTION**
To avoid personal injury:
- First stop the engine and remove the key.
- After servicing, make sure to replace the belt cover in its original position.

1. Press the fan belt down in the middle, with a force of approx. 7 kg (15.4 lbs.). The belt tension is correct if it deflects about 7 mm (0.28 in). If otherwise, loosen bolt (1) shift the alternator (2) in the direction shown by the arrow.
2. Replace the fan belt if worn out, cracked or torn.

**IMPORTANT:**
- If the engine is run with a loose fan belt, the belt could slip and cause overheating of the engine or insufficient battery charging. Check fan belt tension regularly.
- Should the fan belt break or jump off, the indicator light for battery charge will light up. Stop the engine and remove the key immediately.
Checking Radiator Hoses and Clamps

CAUTION
To avoid personal injury:

- Wait long enough for the radiator coolant to cool down.

Check the water hoses for proper connection. This check should be carried out every 200 hours or every 6 months, whichever comes first.
1. Should the hose clamps become loose or water leaks, tighten the hose clamps properly.
2. Should the radiator hoses become swollen, aged or cracked, they must be replaced and the hose clamps tightened again properly.

Inspection and Cleaning Air Filter Element

Open the engine cover and remove the dust cover. Take out only outer element, clean the element, case interior and reassemble. During reassembly, take care to install the dust cover with facing the TOP mark upward. Do not remove the inner element (safety element).

IMPORTANT:

- Should the machine be used in extremely dusty areas, the air filter element must be inspected and cleaned more frequently than in the specified maintenance periods.
- The air filter has a dry element, keep free from oil.
- Do not run the engine without the air filter.

Greasing Swing Bearing

1. Fill with grease through the respective grease fitting.
2. Grease at each 90° (1.58 rad.) position of the swing frame. Using the grease gun, apply 5 shots at every position.
Air Filter Maintenance

**CAUTION**
To avoid personal injury:
- Wear eye protection.

The quickest and safest method of maintenance is the exchange of the paper cartridge. Furthermore, there are different methods of cleaning the cartridge.

**Cleaning with compressed air**
Pressure of compressed air must be under 205 kPa (2.1 kgf/cm², 30 psi), and the cartridge should be blown clean from the inside to the outside until the dust deposits are noticeably reduced.

**IMPORTANT:**
- If the air suction is still inadequate, or the color of the exhaust gases is abnormal even after the cleaning, the air filter cartridge must be replaced.

Checking Fuel Line and Intake Air Line

1. Check to see that all lines and hose clamps are tightened and not damaged.
2. If hoses and clamps are found worn or damaged, replace or repair them at once.
EVERY 500 SERVICE HOURS
Do all 50 hour servicing at the same time.

- Changing Engine Oil (Change the engine oil every 500 hours, or every 1 year in the case that service hour is less than 500 hours)

❗ CAUTION
To avoid personal injury:
- First stop the engine then remove the key and wait long enough for the oil to cool down.

1. Remove the drain plug on the underside of the engine and drain all oil.
2. Retighten the drain plug.
3. Fill through the filling port up the specified level.
4. Let the engine idle for approx. 5 min. Check the engine oil level. To check the engine oil level, insert the engine oil dipstick completely into the respective port opening and pull out again. If the oil level lies between both markings, oil level is sufficient.

IMPORTANT:
- Regardless of the service hours, an engine oil change is due every 1 year.

- Replacing Engine Oil Filter Cartridge
(Replace the engine oil filter every 500 hours, or every 1 year in the case that service hour is less than 500 hours)

1. Replace the oil filter cartridge at the same time as doing the engine oil change.
2. Remove the cartridge with the supplied filter wrench.
3. Oil the O-ring of the new oil filter cartridge lightly. Then tighten the oil filter cartridge by hand.
4. Fill engine oil to the specified level.
5. Let the engine run for approx. 5 min. and make sure that the engine oil indicator lamp does not light up. Then stop the engine and remove the key.
6. The engine oil level is reduced by the amount of the filter capacity after the engine is started. It is necessary to add oil.

IMPORTANT:
- Always check the oil level after having exchanged the filter.

<table>
<thead>
<tr>
<th>Engine oil volumes (with engine oil filter)</th>

Drive Unit Oil Change (First Oil Change of the 100 hours)

**CAUTION**
To avoid personal injury:
- Lower all attachments to the ground, stop the engine and remove the key before undertaking the oil change.

1. Rotate the track so that the drain plug of the drive unit is in the bottom position.
2. Remove the drain plug to let the oil run out. Screw in and tighten the drain plug again and fill with gear oil through the oil check port.
3. Fill oil until it overflows out of the oil check port.

**Oil change**
- first oil change after 100 hrs
- then every 500 hrs
- or at least once a year

4. Use prescribed gear oil SAE 90.

**Replacing Fuel Filter Cartridge**

**CAUTION**
To avoid personal injury:
- Keep fire away.

1. Remove the filter with the supplied filter wrench.
2. Add fuel to a new filter before installing.
3. Apply a light film of fuel to the seal of the new filter and turn in tightly by hand.
4. Open the shutoff-valve of the fuel filter again.

**Replacing Hydraulic Return Filter Element** (First replacement after 250 service hours)

**CAUTION**
To avoid personal injury:
- Remove the oil filter only after the oil in the hydraulic tank has cooled down.

**Replacing Fuel Filter Cartridge**

**CAUTION**
To avoid personal injury:
- Keep fire away.

1. Replace the oil filter cartridge at the same time as doing the hydraulic oil change.
2. Remove the cartridge with the supplied filter wrench.
3. Oil the O-ring of the new oil filter cartridge lightly. Then tighten the oil filter cartridge by hand.
4. Fill hydraulic oil to the specified level.

**IMPORTANT:**
- Always check the oil level when replacing the filter.
EVERY 1000 SERVICE HOURS
Do all 50, 200 and 500 hour servicing at the same time.

Hydraulic Oil Check for Machines with Hydraulic Breakers
The hydraulic oil change after 1000 operating hours in the operator's manual is based on the type of work done. Following inspection measures are valid when hydraulic breakers are used:

1. Changing and filling up of hydraulic oil
   (1) The hydraulic oil must be changed more often when breakers are used because the machine is subject to harder conditions than normal excavating work.
   (2) Use only the recommended oils mentioned in the operator's manual when changing or filling with oil.
   (3) When filling up oil, never mix oils of different makes.

2. Changing the return filter and oil
   (1) The filter must be changed more often because of contamination resulting from the frequent assembly and disassembly of the hoses.
   (2) Use the correct replacement filter.
   (3) Oil change according to operating hours.

<table>
<thead>
<tr>
<th>Normal excavator work</th>
<th>Hydrulic oil every 1000 Hrs.</th>

CAUTION
To avoid personal injury:
- Wait long enough for the hydraulic fluid to cool down. Then begin with the change of the hydraulic fluid.

1. Park the excavator on a firm, flat and level surface. Lower the attachments and dozer blade to the ground and stop the engine.

2. Remove the drain plug on the underside of the hydraulic tank and drain the oil.

(1) Set bolt
(2) Filter support
(3) Return filter
(4) Cover
(5) Suction filter
(6) Drain plug with a magnet
3. Remove the cover of the hydraulic tank
4. With a fork wrench or similar, remove and replace the filter with a new one.
5. Retighten the drain plug, and remove iron powder adhering to the magnet.
6. Fill oil through the oil filling opening on the top side of the tank.
7. Let the engine run for approx. 5 min. and check the oil level again.

**IMPORTANT:**
- Should dirt deposits be in the hydraulic tank, remove with the help of a clean cloth and light oil.

<table>

**Replacing Hydraulic Pilot Filter Element**

**CAUTION**

To avoid personal injury:
- Before replacing the element, wait long enough for the hydraulic fluid to cool down.

1. Remove the arch cover.
2. Remove the hydraulic oil tank cover.
3. Remove the pilot filter case from the head cover.
4. Wrench and pull out the element downward.
5. Replace the O-ring with a new one.
6. Apply a light coating of clean hydraulic oil to the O-ring and fit it to the case firmly. Be careful not to scratch the O-ring.
7. Install the case to the head cover firmly.
8. Let the engine run for approx. 3 minutes.
9. Check the oil level of hydraulic oil tank.
EVERY 1000 SERVICE HOURS OR ONCE A YEAR

- Replacing Air Filter Element
  Open the engine cover and remove the dust cover.  
  Take out outer element and inner element (safety element). 
  Replace inner and outer element. 
  Installing the dust cover, be sure to its TOP mark (arrow) faces upward.

- Replacement of the air filter components may be needed when the machine is used in extreme conditions.

EVERY 1500 SERVICE HOURS

- Checking Fuel Injection Nozzle (Injection Pressure)
  Consult your local KUBOTA Dealer for this service.

EVERY 2000 SERVICE HOURS

Do all 50, 200, 500 and 1000 hour servicing at the same time.

- Changing Front Idler and Track Roller Oil
  NOTE:
  - Contact your KUBOTA dealer for details.

- Checking Alternator and Starter Motor
  NOTE:
  - Contact your KUBOTA dealer for details.

EVERY 3000 SERVICE HOURS

- Checking Injection Pump
  Consult your local KUBOTA Dealer for this service.

ANNUAL SERVICE

- Electrical Wiring and Fuses
  Check the terminals periodically for proper connections.  
  Loose wiring or damaged cables can cause improper functioning or short circuiting of the electrical system. 
  Check wiring and replace damaged components immediately.  
  If a fuse blows out soon after having been replaced, contact your nearest KUBOTA dealer.  
  Do not use fuse other than specified.

BIENNIAL SERVICING

- Replacing Radiator Hoses and Hose Clamps
  Replace radiator hoses and hose clamps every two years.  
  If the hoses are swollen, hard or cracked, they must be replaced earlier.

IMPORTANT:
- Replacement of the air filter components may be needed when the machine is used in extreme conditions.
Changing Radiator Coolant

**CAUTION**

To avoid personal injury:

- When using anti-freeze, put on some protection such as rubber gloves. (Anti-freeze contains poison.)
- If you accidentally swallowed anti-freeze, seek medical attention at once.
- When anti-freeze comes in contact with the skin or clothing, wash it off immediately.
- Do not mix different types of Anti-freeze. The mixture can produce chemical reaction causing harmful substances.
- Anti-freeze is extremely flammable and explosive under certain conditions. Keep fire and children away from anti-freeze.
- When draining fluids from the engine, place some container underneath the engine body.
- Do not pour waste onto the grounds, down a drain, or into any water source.
- Also, observe the relevant environmental protection regulations when disposing of anti-freeze.
- If swallowed, anti-freeze is poisonous to people, animals and birds.

Stop the engine then remove the key and wait until machine has cooled down completely.

1. Open the drain plug on the bottom of the radiator and drain coolant completely. Should a recovery tank be equipped, disconnect the line from the tank floor and then open the drain shutoff-valve.
2. To clean, rinse the radiator with water.
3. Close the drain plug and fill the radiator and the recovery tank with coolant fluid. Let the engine idle for about 5 min., stop the engine and remove the key then check the coolant level.
4. The shipped machine has been filled with 50% anti-freeze solution.

**IMPORTANT**:

- Do not operate the engine without coolant.
- To fill the radiator system and the reserve tank, use fresh water and anti-freeze fluid.
- When the anti-freeze is mixed with water, the anti-freeze mixing ratio must be less than 50%
- Tighten the radiator cap properly. If the cap is loosely or not properly fitted, overheating of the engine can result due to coolant fluid loss.
■ Replacing Fuel Hoses and Hose Clamps
Replace the hoses and clamps.
(See "Checking Fuel and Intake Air Line" in "EVERY 200 SERVICE HOURS")

(1) Fuel lines
(2) Clamp bands

■ Replacing Intake Air line
Replace the hoses and clamps, if necessary.
(See "Checking Fuel and Intake Air Line" in "EVERY 200 SERVICE HOURS")

(1) Hoses
(2) Hose clamps
OTHER ADJUSTMENTS AND REPLACEMENTS

PURGING FUEL SYSTEM
1. Fill up the excavator with fuel.
2. Turn the starter key to the position "RUN".
3. The air in the fuel system will automatically be purged within one minute.

2. Tension the track in the lifted position, so that the distance "A" (clearance between the center track roller and the track surface of the track) is 10 to 15 mm (0.4 to 0.6 in.) (see illustration) In this case, the track seam is positioned on the top center between the idler and the sprocket.

**DANGER**
To avoid serious injury or death:
- Do not work under the machine in this condition.
- For your safety do not rely on hydraulically supported devices, they may leak down and suddenly drop or be accidentally lowered.

ADJUSTMENT OF TRACKS

**Rubber Tracks**
Tension the tracks as specified:
1. Apply grease (2) to the grease fitting (1).

---

**IMPORTANT:**
- If the purging was insufficient, the engine stops operating after starting. In this case repeat steps (2) to (3) again.

---

1. Starter switch
   (A) "STOP"
   (B) "RUN"
   (C) "START"

---

(1) Grease fitting
(2) Grease gun (Option)
IMPORTANT:

● Track seam
The ends of the rubber track are joined with a seam. When adjusting the tracks, the seam must be positioned on the top midway between the idler and the sprocket. By machines equipped with an upper roller, the seam mark should be positioned over the upper roller.

If the seam is positioned incorrectly, the tracks will be tensioned to loosely, and a further readjustment will be necessary.

● Rotate the track after adjustment one to two times to check the tension. To loosen the rubber tracks, follow the same method as for steel tracks.

Additionally following points are to be observed when adjusting rubber tracks.
(1) If the track loosen more than 25 mm (1.0 in.), readjust them.
(2) Check track tension 30 hours after initial use and readjust if necessary. Check and adjust thereafter every 50 service hours.

Special Information when Using Rubber Tracks
1. When turning, make a slow swing turn. Avoid spin turns to reduce lug wear and entry of dirt.
2. The relief valve may be activated if too much dirt and sand clog the tracks. In this case move the machine for a short distance straight backwards to let the earth and sand fall off, then a turn can be made.
3. Avoid using rubber track on riverbeds, stony underground, ferro-concrete and on iron plates. Increased track wear or damage may occur.

Steel Tracks
◆ Track pad plate tension
1. Apply grease (2) to the grease fitting (1).

To check the track tension, the track must be lifted from the ground as shown. The track tension is correct if the clearance between the outer end of the track roller and the track interior surface corresponds to the dimension specified in the table below.

DANGER
To avoid serious injury or death:
● Do not work under the machine in this condition.
● For your safety do not rely on hydraulically supported devices, they may leak down and suddenly drop or be accidentally lowered.

<table>
<thead>
<tr>
<th>(A)</th>
<th>75 to 80 mm (3.0 to 3.2 in.)</th>
</tr>
</thead>
</table>

(1) Drive sprocket
(2) Idler

(1) Grease fitting
(2) Grease gun (Option)
◆ To loosen the tracks, follow following procedure:

**CAUTION**

To avoid personal injury:
- Do not loosen the grease fitting completely or too quickly. Otherwise grease under high pressure in the tension cylinder could squirt out.
- Make sure that no obstacles, such as stones are caught in the track. Remove such obstacles before adjusting the track tension.

1. Loosen the bolt of the cover and remove the cover.
2. Using a socket wrench, loosen the grease fitting a few turns.
3. When grease oozes out from the thread, rotate the track and loosen the track in the lifted position (see illustration).

**After adjustment is completed:**

After adjusting track tension (See “ADJUSTMENT OF TRACKS”)

Using the socket wrench, tighten the grease fitting.

Tightening torque must be between 1000 to 1100 kgf-cm.
(72.3 to 79.6 ft-lbs.)

**IMPORTANT**:
- If the tracks are too tight, wear is increased.
- If the tracks are too loose, the track pads may collide with the sprocket, wear is increased.
  The track may dislocate or come off.
- Clean the track after every use.
- Should the track tension be high due to sticking mud, lift the track with the help of the boom, arm and bucket, idle the engine and remove mud from the track, especially from the openings of the link plate carefully.

**CHANGING THE BUCKET**

**CAUTION**

To avoid personal injury:
- When the coupling pins are removed or installed, chips may come off. Always use gloves, goggles and a helmet.
- When the change of the equipment must be performed with the engine running, always work as a 2-person team.
  One person sits in the operator's seat and the other works on the machine.
- Do not use your fingers to center the holes, since they may be injured or even cut in case of sudden or uncontrolled movements.
- Read the manual of the attachment to do a correct operation safely when other attachments are installed instead of Kubota specified bucket.
FUSES

CAUTION
To avoid personal injury:
- When changing fuse, stop the engine and turn the key in position "STOP". Keep the lock lever for attachment control in the "LOCK" position.

Replacing Fuses
1. Remove the cover of the fuse box.
2. Replace the burnt out fuse with a fuse having the same capacity.

Fuse Capacities and Circuits

Slow Blow Fuse
Slow blow fuse is provided to protect the electrical circuits. If the fusible link is blown, check the electrical circuits for trouble and then replace with a new compatible slow blow fuse.

Auxiliary Electric
Max power is less than 120 W including the "Beacon" (Auxiliary electric).
If you need another auxiliary electric, contact your KUBOTA dealer for details.

NOTE:
- If the machine keeps idling on the reserve power, the battery gets discharged. Raise the engine rpm.
If the mini-excavator does not show the desired performance, or when trouble arises, refer to the table below and undertake appropriate measures.

<table>
<thead>
<tr>
<th>Trouble</th>
<th>Cause</th>
<th>Solution</th>

</tr>
<tr>
<td>7</td>
<td>Hydraulic suction filter element</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(The message reappears on the hour meter designated next.)

**NOTE:**
- The maintenance message disappears automatically in about 10 seconds.
- When the key is turned from OFF to RUN, the maintenance message reappears and disappears again automatically in about 10 seconds.
- When the key is turned from OFF to RUN repeatedly 10 times, the message disappears.

- In case the service hour meter replaced due to any trouble with it, the meter is set to "0". Contact your KUBOTA dealer for details.
PREPARATION FOR OPERATION IN COLD WEATHER

1. Replace engine oil and hydraulic oil with those of viscosities suitable for cold weather.

2. In cold weather, battery power drops, and the battery fluid may freeze if the battery is not sufficiently charged. To prevent the battery fluid from freezing, be sure to keep the battery charged at least 75% or more of its capacity after operation. To ease next starting, it is recommended to keep the battery stored in closed or heated rooms. If the battery fluid level is too low, do not add after operation, but add with the engine running before the next operation.

3. Add anti-freeze to coolant in the radiator and recovery tank, if the ambient temperature is expected to drop below 0°C (32°F). Mixing ratio of water and anti-freeze depends on the expected ambient temperature.

- Mixing ratio between water and anti-freeze

<table>
<thead>
<tr>
<th>Ambient Temperature (°C)</th>
<th>-5 (+23)</th>
<th>-10 (+14)</th>
<th>-15 (+5)</th>
<th>-20 (-4)</th>

<td>Water %</td>
<td>70</td>
<td>70</td>
<td>70</td>
<td>65</td>
<td>60</td>
<td>55</td>
<td>50</td>
</tr>
</tbody>
</table>

IMPORTANT:

- Use permanent anti-freeze or long-life coolant.
- Drain the coolant completely and clean the inside of the radiator, then fill with the water and anti-freeze mixture.
- The anti-freeze acts as an anti-corrosive, it is not necessary to add an additive to the water and anti-freeze mixture.
- See "Coolant check" under "DAILY CHECKS" in "MAINTENANCE" for radiator fill volumes.

PROCEDURE AFTER DONE WORK

Clean the excavator thoroughly after work and wipe dry. Otherwise mud and earth on the tracks could freeze if the temperature drops below the 0°C (32°F) mark. Operation of the excavator is then not possible. Store the excavator in a dry place; if not possible, store on wooden planks or on mats. If the excavator is kept on damp or muddy ground, the tracks could freeze overnight. Operation of the excavator is then not possible. Furthermore, the reduction gear may be damaged. Additionally, the piston rods of the hydraulic cylinders must be rubbed dry. Otherwise severe damage could occur if dirty water seeps through the seals.
CAUTION
To avoid personal injury:
- Do not clean the excavator with the engine running.
- To avoid the danger of exhaust fume poisoning, do not operate the engine in a closed building without proper ventilation.
- When storing, remove the key from the starter switch to avoid unauthorized persons from operating the excavator and getting injured.
- Bring the excavator on a firm, flat, and level surface. Lower the attachments and dozer blade on the ground.

Should the Excavator be Stored for a Longer Period of Time, Observe Following Procedures:
1. The whole excavator should be cleaned thoroughly and in all cases stored indoors. If the excavator has to be kept outdoors, lay out wooden planks on even ground, place the excavator on the planks and cover completely.
2. Do an oil change and grease the excavator.
3. Heavily grease the visible section of the cylinder rods.
4. Remove the battery and store indoors.
5. If it is expected that the temperature will sink below the 0°C (32°F) mark, add anti-freeze or drain coolant completely.

IMPORTANT:
- Wash the excavator after stopping the engine.
  If you wash the excavator while running the engine, splashing water gets into the air cleaner through its intake and cause engine damage.
  Carefully wash and do not splash water over the air cleaner while the engine is running.

Observe Following Procedures when the Machine is to be Operated after Long Storage.
1. Wipe off the grease from the hydraulic cylinder rods.
2. Turn on the engine and operate the attachments and the drive mechanisms under no load in order to circulate the hydraulic oil.
   (If the machine is stored for longer than one month, do steps 1 and 2 once every month.)
Periodic replacement of important component parts

To ensure safety in operation, you are strongly requested to inspect and service the machine at regular intervals. For added safety, ask your KUBOTA dealer to replace the following important component parts.

These parts are prone to degradation in material or subject to wear and tear with time. It is difficult to judge how much they have been affected at regular inspection. It is therefore necessary to replace them with new ones, whether wear is visible or not after a specified time of use.

If any of them is found worn to be even before the specified use, they must be repaired or replaced the same as other parts.

If any of the hose clamps are found deformed or cracked, the hose clamps must also be replaced.

For the hydraulic hoses other than the ones to be replaced periodically, inspect them for the following points. If found loose or very worn, tighten and / or replace the hose.

When replacing the hydraulic hoses, change their O rings and sealing components with new ones. For replacement of the important parts, contact your KUBOTA dealer.

- At the following periodic inspections, check the fuel hoses and hydraulic hoses as well.

</table>

To prevent serious damage to the hydraulic system, use only a KUBOTA genuine hydraulic hose.
### RECOMMENDED OILS

**IMPORTANT:**
1. Before delivery the hydraulic oil used was Shell Tellus S2M46.
2. Use engine oil API service classification CF/CF-4 or better and SAE10W-30.
3. Use SAE 90 (API, GL-4/GL-5) as drive unit oil for all seasons.

◆ Fuel:
  - Cetane number of 45 is minimum. Cetane number greater than 50 is preferred, especially for temperatures below -20 °C (-4 °F) or elevations above 1500 m (5000 ft).
  - Diesel fuels specified to EN 590 or ASTM D975 are recommended.
  - No.2-D is a distillate fuel of lower volatility for engines in industrial and heavy mobile service. (SAE J313 JUN87)

</tbody>
</table>
1. The lifting capacities are based on ISO 10567 and do not exceed 75% of the static tilt load of the machine or 87% of the hydraulic lifting capacity of the machine.

2. The strokes are as follows:
   (1) The load point corresponds to the front bolt part of the arm.
   (2) The machine positions are (i) over - front (Blade down), (ii) over - front (Blade up), and (iii) over - side.
   (3) The operating cylinder is the boom cylinder.

3. The bucket of the excavator, the hook, the sling and other lifting accessories are taken into consideration for the loads.

Machine conditions:
No bucket, all others according to the standard regulations.

⚠️ WARNING

To avoid personal injury or death:
- No loads greater than those values mentioned in the lifting capacity tables are to be lifted.
- The values mentioned in the table are valid only on even, hard grounds. When lifting on soft ground, the machine can tip over due to the load being concentrated only on one side of the machine.
- The table values are calculated at the end of the arm without the bucket. In order to find the allowable loads for machines with bucket, the bucket weight must be subtracted from the values in the table.
